JEFRi Reporting

April 8, 2012

Contents

1 Overview

JEFRi reporting is a software module to ease the creation of formatted reports for applications storing data in JEFRi runtimes. The reporting framework makes full use of JEFRi features, including GET transactions and DSOAP calls, while specifying a data format similar to that used in other places in a JEFRi app.

Specify joins from smallest to largest

_aggregate: _type: "receipts", _group: "week", date: ['¿', '2011-05-05'] , field: function, field: function

Define data types.

Specify report from largest to smallest
